This journal is devoted to all severe psychopathologies in childhood and is not necessarily limited to autism and childhood schizophrenia. The following topics fall within its scope: (1) experimental studies on the biochemical, neurological, and genetic aspects of the disorder; (2) the implications of normal development for deviant processes; (3) interaction between disordered behavior of individuals and social or group factors; (4) research and case studies involving the entire spectrum of interventions, including behavioral, biological, educational, and community aspects; (5) diagnosis and classification of disorders reflecting new knowledge.

Topics may be explored in several forms: (1) experimental studies of original research; (2) theoretical papers based on scholarly review of relevant topics; (3) critical reviews of important research or treatment activity; (4) case studies in which new insights for the individual are demonstrated and implications for other children or research are discussed. Papers, or substantial parts of such papers, that have already been published or committed elsewhere will not be accepted for publication in this journal.
